Sources: Housing Finance, Council of Mortgage Lenders and ONS website. Derived from the DoE/BSA 5% sample survey; from 1993 the wider Survey of Mortgage Lenders and from 2005 the Regulated Mortgage Survey.

Notes: The average prices are not adjusted for changes in the mix of properties mortgaged to building societies and other mortgage lenders. There is a discontinuity in the series between 1992 and 1993, due to the switch to the wider Survey of Mortgage Lenders. Data for England relate to standard statistical regions. All figures to 1990 (other than England) to nearest 100; all others to nearest 1,000.

Sources: Compendium of Housing Finance Statistics, Council of Mortgage Lenders, ONS House Price Index, derived from the Regulated Mortgage Survey (and its predecessor surveys).

Notes: The indexes are adjusted for changes in the mix of properties mortgaged to building societies (to 1993) and mortgage lenders (subsequent years). This discontinuity has little impact on the mix-adjusted house price for the UK, but there is some variable impact on the regional indexes. Data in England are for standard statistical regions from 1970; with data for government office regions from 2000 (names in italics). Standard and government office regions are identical for Yorkshire & Humberside, East and West Midlands, London and the South West. Where standard and government office regions differ the government office region figures are shown immediately below the standard region they most resemble.

The mix-adjustment series in this table covers a rolling three-year period for the years to 2000, and for the standard statistical regions to 2008. This series does not provide full like-for-like comparable house price data over a longer run of years.

From 2000 onwards the UK, four countries and government office regions mix-adjusted data series are based on the new ONS House Price index, which provides a full like-for-like comparison over a long run of years.
