Sources: Regional Trends, New Earnings Surveys, Annual Survey of Hours and Earnings.

Notes: Earnings figures are inclusive of overtime. There were changes of methodology in 2004, 2006 and 2011, which all slightly reduced average earnings figures compared to the previous years.

Figures to 1995 are from the New Earnings Survey, and for Great Britain only. Figures from 2000 are from the Annual Survey of Hours and Earnings, and are for the United Kingdom.

Great Britain figures for male and female manual earnings for the years to 2002 can be found in previous editions of the Review. Data for those income groups were discontinued in 2003.
