- Notes:
1. The tolerable standard was amended by the Housing (Scotland) Act 2006 to include additional criteria, covering thermal performance and electrical safety. Following implementation of this amendment in April 2009, the 2010 survey reported a significant increase in the fail rate for the tolerable standard.
 2. The incorporation of the House Condition Survey into the wider Scottish Household Survey in 2012 may have introduced some discontinuities in the survey method and thus the observed results over time the House Condition Survey forms part of the wider Scottish Household Survey.

Notes: The 'all' column includes households living rent free that could not be assigned to a specific tenure.

Figures for 2014-16 are not fully comparable to previous years due to minor methodological changes.

Notes: SAP is the Standard Assessment Procedure for energy rating of dwellings. It is an index based on calculated annual space and water heating costs for a standard heating regime expressed on a scale of 1 (highly inefficient) to 100 (highly efficient). The SAP methodology changes periodically and the relevant one ('SAP 2005', '2009' and '2012') is shown above the years to which it applies. Figures for the small number of households living rent-free are reflected in the all tenure figures.

Notes: The EPC Bands are based on SAP ratings (shown in brackets) and range from 'G' (very poor) to 'A' (highly efficient).

The SAP methodology changes periodically and the relevant one (SAP 2005, 2009 or 2012) is shown above the years to which it applies.

Tenure figures only available from 2015; households living rent-free are included in the all tenure figures.
