Sources: ONS, UK National Accounts, UK Economic Accounts, plus Inflation and Price Indices.

Notes: 1. Gross household disposable income (GDHI) figures are seasonally adjusted (RPHQ). It is the amount of money that all individuals in the household sector have available for spending or saving after all taxes, social contributions and benefits have been taken into account. The household sector includes all individuals, including people living in institutions and the self-employed, but it excludes non-profit bodies such as charities.

2. Gross household consumer expenditure figures are seasonally adjusted (ABJQ) and were substantially revised in 2018 as part of the modified GDP methodology.

3. The 'savings ratio' is the ratio of savings to household disposable income.

4. For the years to 2005 the increases are the average annual increase over the previous five years.

5. Constant prices calculated based on the Composite Price Index (January 1974 = 100).

Source: ONS Regional gross disposable household income.

- Notes:
1. Gross disposable household income estimates relate to totals for all individuals within the household sector for a region and not to the average for each household.
 2. The household sector includes all individuals, including people living in institutions and the self-employed but now excludes nonprofit bodies such as charities.
 3. 2018 estimates are provisional and figures for regions may not sum to totals for country due to rounding by ONS.
